Ingredients

- Theme Service
- Preset Styles
- Dynamic Styles applied to the UI

Theme Demo

Gradients & Shapes

How to Gradient

- Native Code
- SkiaSharp
- PancakeView

How to Shape

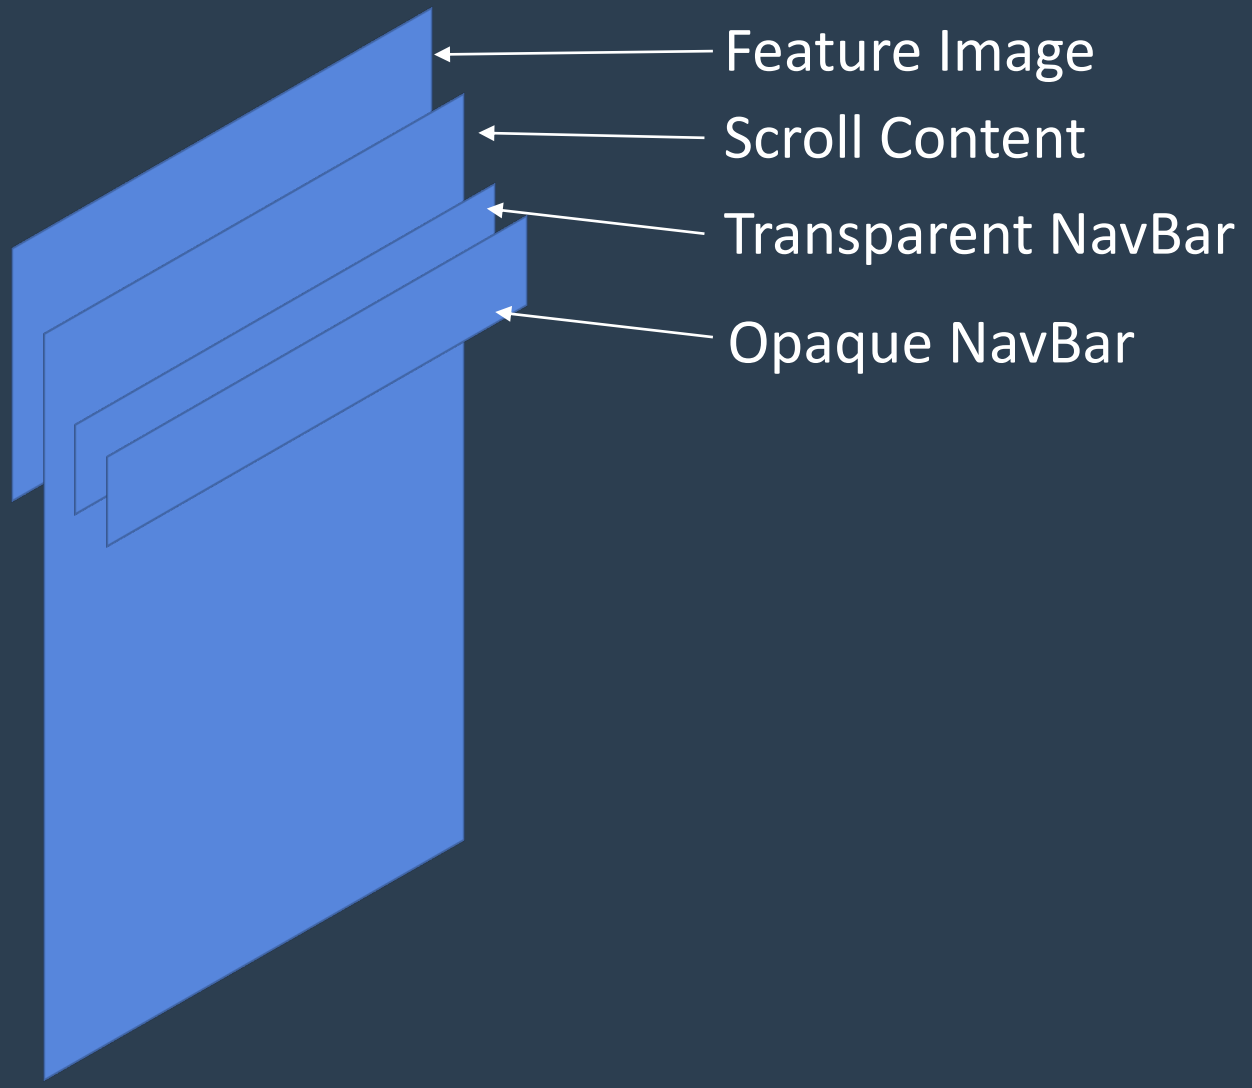

- Xamarin.Forms
  - Circle
  - Square / Rectangle
- Bitmap image
- Vector image
- Drawn
  - SkiaSharp
  - Native Code

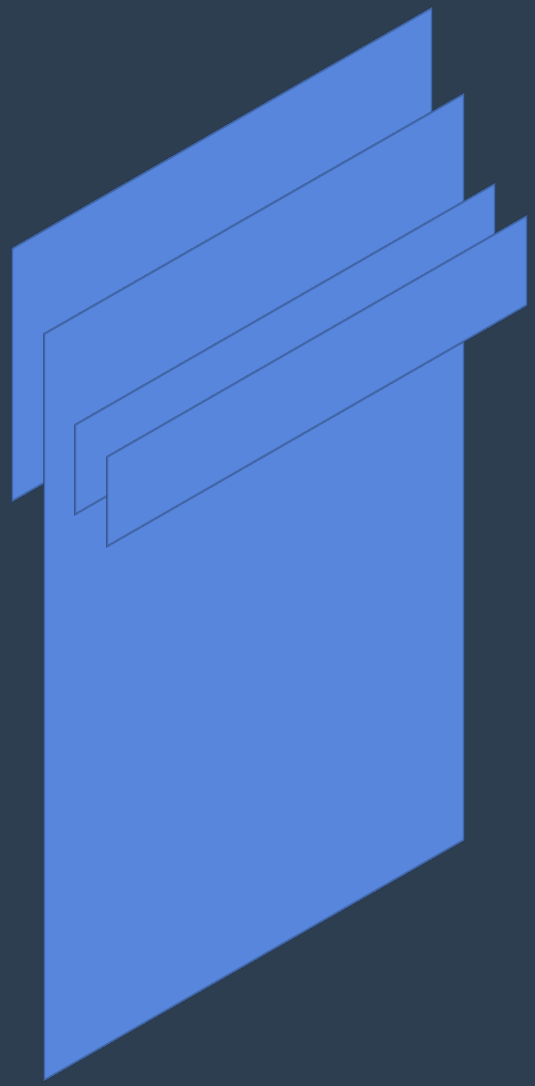

Gradients & Shapes Demo!

Parallax

Layers

Feature Image
Scroll Content
Transparent NavBar
Opaque NavBar

Layers

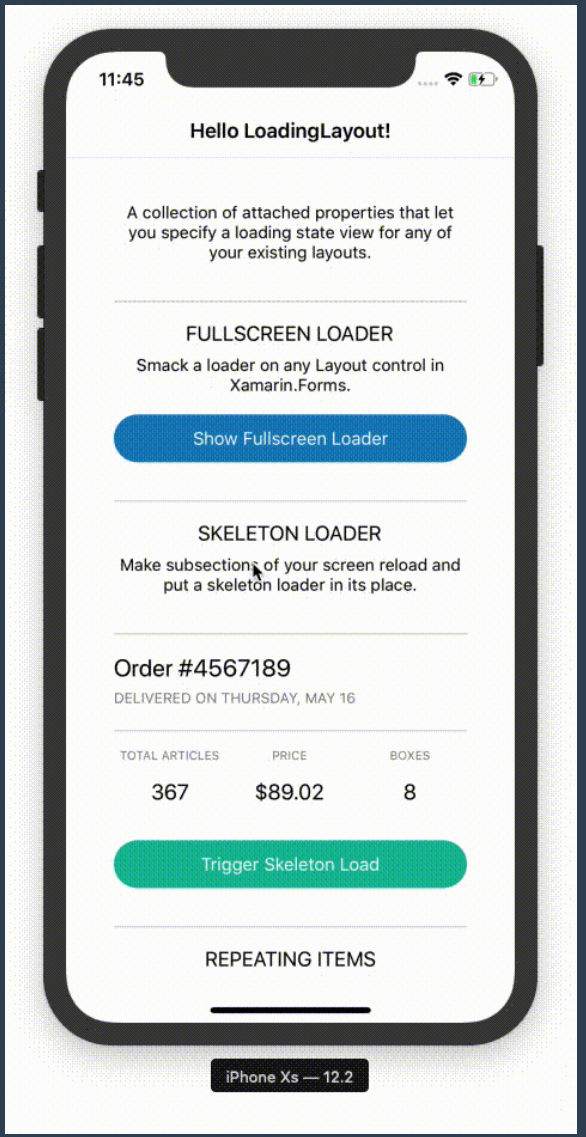

Ingredients

- ScrollPosition / ScrollPercentage
  - A value that is changing based on user input
- Bindings
  - A way to apply the change to the secondary element
- ValueConverter
  - A way to apply an offset to create the parallax effect
  - Optional: A min/max (start/end) to constrain the effect

```
(percentage * max) * factor;
```

Transitions

11:45
Hello LoadingLayout!
A collection of attached properties that let you specify a loading state view for any of your existing layouts.
FULLSCREEN LOADER
Smack a loader on any Layout control in Xamarin.Forms.
Show Fullscreen Loader
SKELETON LOADER
Make subsections of your screen reload and put a skeleton loader in its place.

Xamarin

What makes a good Transition

- Tell people SOMETHING is happening
- Communicate WHAT is happening
- Fill the time

When to use a Transition

- Changing states
- Updating data
- Short running processes
- Validation

Transition Guidelines

Do

- Make it meaningful
- Make it natural
- Make it as brief as possible
- Trigger it in response to a user action
- Make it reversable

Don’t

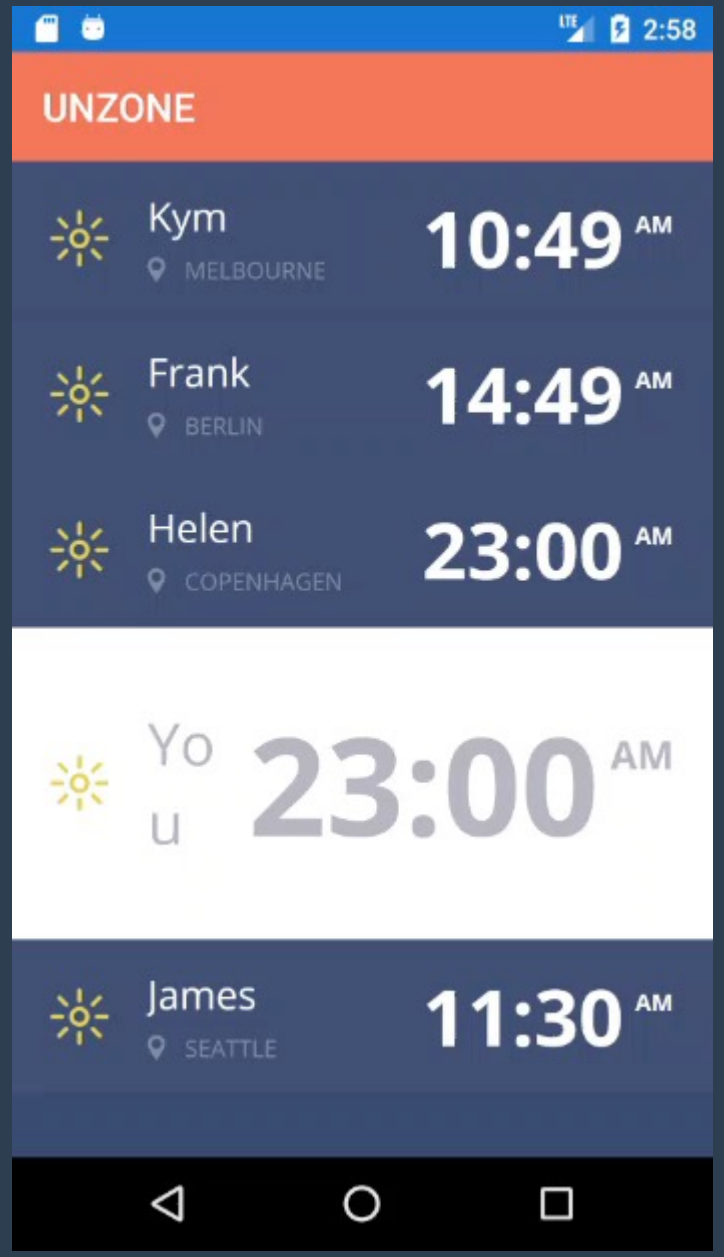

- Be gratuitous
- Be a hindrance
- Transition more than 1 thing or group of things at a time
