Xamarin.Forms 4.3 Prerelease and the CarouselView Challenge

Paul

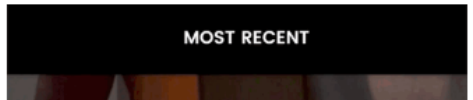

September 11th, 2019

Today we're announcing the first prerelease of Xamarin.Forms 4.3! The focus of this release is the new CollectionView, a successor to the current ListView. Back in April, we asked you to participate in a CollectionView challenge. The purpose of the challenge was to gather feedback from you, the community, to make certain that the CollectionView can provide out-of-the-box functionality that meets your biggest needs.

Thanks to that feedback, we highlighted key areas that still needed some work. Such as group headers/footers and pull-to-refresh functionality. Now you can see the results of that work in this 4.3 prerelease. We welcome you to try these newly added features and continue to provide us with any feedback on GitHub.

Much Ado About CarouselView

As part of the CollectionView's development, we are also developing the CarouselView. Much of CarouselView's implementation is based on CollectionView which can provide unique functionality within your apps. A great example of this is the ability to set "peek insets," which indicate to the user that they can scroll horizontally to the next item by showing a small portion of the items to its sides.
